ROSTRA PRECISION CONTROLS INTRODUCES BABYCAM®

LAURINBURG, N.C. - Rostra Precision Controls, Inc. has recently introduced BabyCam®, a system which allows safe and easy monitoring of children in their car seats without taking driver focus from the road.

Offered as an "add-on" to the RearSight™ back-up camera systems, this safety-conscious product is designed for use in SUV's, Vans, RV's and can even be used to monitor the interior of horse trailers. BabyCam features a small, compact, wide-angle view that prevents requiring the driver to turn around to check on children riding in the back seat and infants in a reverse-oriented car seat.

A flush-mount installation places the state-of-the-art high-quality color camera in the center of the vehicle's roof interior/headliner for a streamlined, OEM-like appearance. The camera plugs directly into the mirror for easy driver viewing. A 3.5" LCD color display is included that is built into the RearSight™ rearview mirror to allow quick driver monitoring of children.

Rostra offers a complete line of back-up camera products providing a choice between rear view mirror monitors or LCD monitors with 3.5" & "screens and dual video inputs that will also accommodate navigation systems or DVD.
